Career Objective:

A responsible and motivated software professional with over 4.7 years of experience in application development, support, database systems, and enterprise legacy platforms, seeking an opportunity in a dynamic organization where I can contribute my technical expertise, strengthen system reliability, and grow through continuous learning and meaningful project involvement.

Scholastic Credential:

- Saranathan College of Engineering, Tiruchirappalli, India — July 1,2017 – July 31, 2021
  Bachelor of Engineering (B.E.,) — CGPA – 7.66
  Electronics and Communication Engineering

Professional Experience:

- Currently working as System Engineer in Tata Consultancy Services, Bengaluru (From December 2021).

Technical Skills & Tools Based on Work Experience:

- Core Java, API Development & Integration
- Oracle SQL (SQL Developer & SQL Server)
- PostgreSQL (PgAdmin & PostgreSQL Server)
- Eclipse for Java Developers (IDE), Postman (Testing)
- Cloud - Amazon Web Services, Microsoft Azure
- Linux
- Shell Scripting
- Server FTP & Logs: WinSCP, PuTTY
- Version Control System – SVN & Git
- Service Now

Project Details:

Tata Consultancy Services — December 2021 – Current
Role: Application Manager — Client: Bayer - Germany

Bayer is a global leader in life sciences focused on healthcare, agriculture, and nutrition, delivering innovative solutions to address the needs of a growing and aging population and enhance quality of life worldwide. Worked on multiple legacy enterprise applications supporting business-critical operations, including:

- A chemical search and ordering platform integrated with inventory management and tracking systems to support procurement workflows.
- A database-driven application with APIs for searching and retrieving chemical compound information based on defined parameters.
- An authentication and authorization system providing secure access control and integration for dependent enterprise applications.
- Developed features, APIs, integrations, and enhancements for three additional legacy applications supporting business-critical operations.

Responsibilities:

- Developed and maintained backend applications, REST APIs, business logic, and database components for enterprise applications.
- Designed and implemented API integrations between applications and dependent enterprise systems.
- Developed database queries, data retrieval logic, validations, and application-level processing.
- Enhanced existing applications based on business requirements while maintaining compatibility with legacy systems.
- Performed API testing, debugging, troubleshooting, and performance analysis to ensure application reliability.
- Conducted Root Cause Analysis (RCA) for application and integration issues and implemented permanent fixes.
- Participated in code development, testing, deployment, release activities, and environment configuration across application lifecycle stages.
- Collaborated with offshore and onshore teams, stakeholders, and external vendors to deliver application enhancements and integrations.
- Maintained technical documentation covering application components, APIs, integrations, deployment procedures, and operational processes.
